

5 Star Under the Stars!

www.backyardglamping.com.au

Congratulations on hiring our projector! We hope you have a fantastic night watching movies in your tent, here's how to use it:

1. Turn the projector on by rotating the stand. Wait about 40 seconds for it to boot up to the main screen (after the Viewsonic logo first appears).
2. Place it on the small stool that we provide for you.
3. Pull the fabric tab on the side to reveal the connection ports. Connect your device.
4. Using the buttons on the back of the projector, select the port you are using.
5. Focus the image using the dial next to the lens.
6. Aim the projector so the bottom of the screen is parallel and about 5-10cm above the horizontal zipper that runs around the tent on the inside. The screen will be larger the further back you put the projector.
7. Enjoy!

We strongly recommend that you download your movies before your party, to avoid disappointment if your internet service does not work in your backyard.

Most people use an iPhone or iPad with the Projector using our supplied adaptors, but you can use any device that has a HDMI output, such as a laptop or Blu-Ray/DVD player.

The projector will last approximately 3 hours on its internal battery. You can connect it to mains power but Buone Notti will not be liable for any electrical hazard created by power leads in your backyard or in the tent.

Please do not leave the projector in the tent or outdoors overnight. If the projector is damaged, a \$500 replacement fee will apply.

DO NOT LOOK DIRECTLY INTO THE PROJECTOR LENS OR YOU COULD DAMAGE YOUR EYES!

In the Box:

- Viewsonic M1 Projector
- HDMI Cable
- USB-C Cable
- Apple Lightning to HDMI adaptor
- AC power lead and AC-DC transformer

Troubleshooting

Your projector comes fully tested and charged, but sometimes things just don't go to plan.

The root cause of most problems is a poor internet connection in your backyard. Wi-Fi is often not strong enough outside the house. We recommend downloading your movies beforehand. If this is not possible, try using cellular data on your phone.

Don't try to download the movie outside! Go inside, where your Wi-Fi works, to download the movie.

Using Foxtel Go

Due to rights management issues, Foxtel does not allow playing Foxtel Go on external devices. This means you can't output Foxtel Go from your mobile device to HDMI and therefore the projector. To get around this restriction you must pay Foxtel for a "Multi-Room" licence. You will get audio but no video.

No audio

If using a laptop computer, you may need to select the Viewsonic M1 Projector in your Audio Output settings on your computer.

No picture

If using a laptop computer, you may need to select the Viewsonic M1 Projector in your Video Output settings on your computer.

Are you using Foxtel Go? Please see the note above.

If you have a poor internet connection, you may receive audio but no picture on the projector. This is the most common source of problems. Every device and streaming service is different, but in general if you can see the Home Screen of the device on the projector, but your actual video won't play, it is because your device can't get enough internet service to stream the video. Sometimes the audio still comes through though, because audio requires less internet power than video.

If your home Wi-Fi network won't reach outside or the connection is just too poor, try using cellular data from your smartphone. You can connect your iPhone directly to the projector (make sure you turn the Wi-Fi off on the phone) or you can use it as a hotspot to your laptop.

Changing connections can cause the streaming app to get stuck. Close the app and restart it after switching connections.
